ABSTRACT

This workbook is designed to train serials catalogers in acquiring on-line cataloging skills, and specifically to help them with practical problems in cataloging serials for the Ohio College Library Center (OCLC). Sections cover the basic activities and methods in using OCLC. Tagging aids, sample forms, discussions of special problems, and increasingly sophisticated problem drills are provided. (Author/KP)

 * Documents acquired by ERIC include many informal unpublished *
 * materials not available from other sources. ERIC makes every effort *
 * to obtain the best copy available. Nevertheless, items of marginal *
 * reproducibility are often encountered and this affects the quality *
 * of the microfiche and hardcopy reproductions ERIC makes available *
 * via the ERIC Document Reproduction Service (EDRS). EDRS is not *
 * responsible for the quality of the original document. Reproductions *
 * supplied by EDRS are the best that can be made from the original. *

Preface

The Workbook was designed to train serials catalogers in acquiring on-line cataloging skills and was first used in a course taught at the SUNY at Stony Brook Libraries from January through April, 1977. Specifically written to help serials catalogers with practical problems encountered in cataloging serials for OCLC, it contains tagging aids, sample forms, discussions of special problems, and increasingly sophisticated problem drills.

Introduction

Cataloging serials on OCLC is a sophisticated kind of translating. The basic problem is to turn a natural language like English into something that a machine can recognize and manipulate.

To do this information must be coded and then stored in fixed and in variable fields.

The fixed-length data elements have predetermined positions or addresses. Information coded by a cataloger must be input in the proper character position in the fixed fields. There are 0 through 39 addresses in the fixed fields. The country of publication codes, for example, occupy positions 15, 16, and 17. If the journal in hand is being published in New York, "nyu" must be input at this address. Information is retrieved when a programmer writes software that tells a computer to search positions 15, 16, and 17 and to look for the letter "n" followed by the letter "y" followed by the letter "u." The programmer tells the computer that when these letters are found the record in which they are found is to be printed or displayed. In this way a printout of all works in the data base that are being published in New York can be obtained.

The variable-length data elements do not have predetermined positions or addresses. The cataloger cannot use an address like numbers 15, 16, and 17 within a variable field. Instead a numeric tag marks the beginning, delimiters mark off sections within, and a paragraph mark shows the end of each variable field. The imprint of the journal published in New York would be addressed by the tag "260"; the publisher by delimiter "#b"; the date by delimiter "#c"; the end of the field by the paragraph mark "¶". If the computer were instructed to search the 260 field of each record for "American Academy of Science" in the portion of the field delimited by #b, a display or printout of serials published by the Academy could be obtained.

In a way computers are like children. Children often learn to read distinctive words like "marshmallow" long before they can read words like "that" or "and". Computers recognize patterns too.

Introduction (con'd)

When the author, title, or author/title search keys are used to search the data base, the computer is matching patterns just as it did when it looked for "nyu". Author search keys are signalled by two commas; title search keys by three commas; author/title search keys by one comma. When the computer is asked to search the data base for the title of the periodical, "Journal of population research", what really happens is that the three commas of the search key tell the computer which variable fields to search. Title patterns are 3,2,2,1; 3,2,1,1; 3,1,2,1; and 3,1,1,1. If the cataloger chooses the first pattern and searches the title as "jou,of,po,r", the computer will print out any exact match. There is the possibility that records with different titles such as "Journal of poultry research" or "Journal of popular rendezvous" may be retrieved as well as that of the one being searched.

To put it briefly, the cataloger translates English into patterns that a machine can recognize and manipulate.

SERIALS WORKBOOK

BASIC TAGGING OUTLINE

- 0 - Numbers, control, and knowledge
- 1 - Main entry fields
- 2 - Title, edition, and imprint fields
- 3 - Collation, frequency, price and publication fields
- 4 - Series statement fields
- 5 - Notes fields
- 6 - Subject entry fields
- 7 - Added entry and linking entry fields
- 8 - Series added entry fields
- 9 - User option area data field

SERIALS WORKBOOK

VARIABLE FIELDS: COMPARISON

	<u>Author (1xx)</u>	<u>Series (4xx)</u>	<u>Subject (6xx)</u>	<u>Added (7xx)</u>	<u>Series (8xx)</u>
<u>Personal</u>	200	400	600	700	800
<u>Corporate</u>	110	410	610	710	810
<u>Conference/ Meeting</u>	111	411	611	711	811
<u>Uniform Title</u>	130		630	730	

SERIALS WORKBOOK

CHECKLIST OF COMPLEX RELATIONSHIPS

LANGUAGE CODES

If one language code suffices to describe work, then use only "Lang".
If more than one language code is needed, then use "Lang" and 041.

If 041 0p, then "Lang" and 546 can be used together.
If 041 1p, then "Lang" and 765 can be used together.

LATEST TITLES

For former title or title varies notes, use 247 if note is simple;
use 547 if note is complex.

SUCCESSIVE TITLES

For former title or title variant notes, use 780 if note concerns
preceding entry; use 785 if note concerns succeeding entry.

LINKING ENTRY NOTES

If 760-787 1x linking entry notes, then must use 580 complex linking
entry note.

If 760-787 0x linking entry notes, then note is printed automatically
and no 5xx note can be coded.

SERIES STATEMENT

If series statement, must use either 760 0x OR 760 1x and 580.

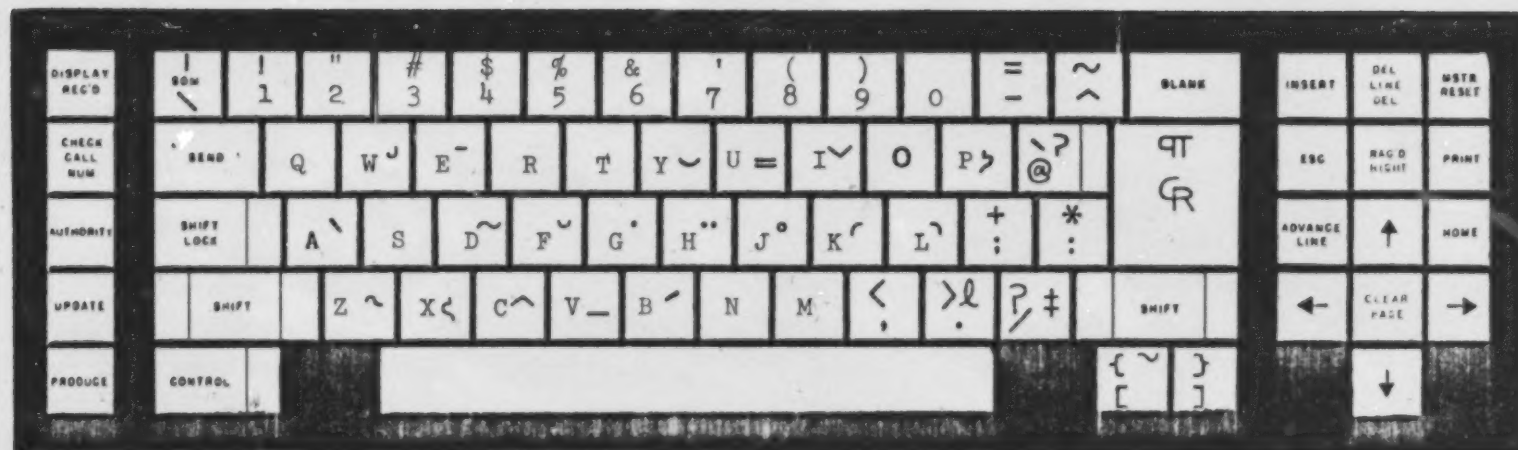

If series appears in a 5xx note, then must use 760 1x without 580.

SERIALS WORKBOOK

QUICK INDEX TO TITLE-FIELD NOTES

NOTE	CODED AS	
Added title page titles	: code title added entries for inverted full titles as	246 15
"At head of title:" note (If added entries are needed from 500 note, <u>also</u> use	: code as	500 pp 246 10

CREATION OF DUPLICATE RECORDS

Beware of creating duplicate records of our own input. This occurs when the system crashes just as the PRODUCE command is given.

Don't give the command again.

Wait until the system comes up.

Reformat.

Check to see:

- 1) whether there is an OCLC number in the fixed fields, and
- 2) whether our library symbol is in the holdings string at the bottom of the record.

If both are there, the record has been produced.
If not, give the PRODUCE command a second time.

SERIALS WORKBOOK

DUPLICATE RECORD REPORT FORM AND PROCEDURES

Report duplicate records to OCLC on the form shown below.

SUNY at STONY BROOK		DUPLICATE RECORD REPORT	
Reporting Library:		LC copy ☐ Yes ☒ No	
OCLC #:	Catg. source:	VZI	
Lower 1789603			
Higher 2159862	Inputing liby:	OSU	
SUSB 510 (3-75)			

If we have created the duplicate record, follow the instructions below:

1. If our library is still the only holding library then,
 - a) Add an 043 field: DO NOT USE THIS RECORD; USE OCLC NO. _____. Key in "rep" at home position, then depress UPDATE and SEND.
 - b) Cancel our holdings from the duplicate record by keying in "ca" at home position, then depress UPDATE and SEND, thereby deleting the symbol from the bottom of the record.
 - c) Add our holdings to the record to be retained (the lowest OCLC number) by depressing UPDATE and SEND. To insure that our archive tape contains complete cataloging and accurate holdings information, you will first have to edit the data to reflect cataloging desired, including local call number, SEND each field corrected, enter complete holdings information in the 049 field, SEND that field, then transmit the entire revised record by depressing UPDATE and SEND.
2. If our library is no longer the only holding library, report the duplicate to OCLC on the form shown above.

SERIALS WORKBOOK

MULTIPLE COPIES AND EXTRA CARDS

At times you will catalog multiple copies of a serial, the different copies going to different holding libraries. We have had difficulty in getting the correct number of card sets as well as the correct number of extra cards needed for those sets when producing for multiple holdings libraries.

The recommended procedure worked out in consultation with OCLC is as follows:

Determine which location symbol you wish to print on the cards for the Union Catalog of the Main Library. Then,

- 1) In the 049 field, key in that CODE
- 2) Advance and SEND
- 3) PRODUCE/SEND
- 4) Reformat
- 5) At Home, key in lxc,ad
- 6) PRODUCE/SEND

This will produce a card set for the Union Catalog and a card set for the holding library represented by the CODE in 1 above. It will also produce one extra card with the location symbol of that holding library to use as a shelflist card in the Union Shelflist for the departmental library.

To produce cards for a second holding library,

- 1) In the 049 field, key in the CODE of the second library followed by the CODE of the first holding library
- 2) Advance and SEND
- 3) At Home, key in ad
- 4) PRODUCE/SEND
- 5) Reformat
- 6) At Home, key in lxc,ad
- 7) PRODUCE/SEND

This will produce a card set as well as an extra card for the second copy of the serial in the second holding library without producing any cards either for the Union Catalog or for the first holding library.

This procedure means that we will not use the "all PRODUCE," the "all, ad PRODUCE," the "all,_xc PRODUCE," the "all,ad,_xc PRODUCE," or the "all,_xc,ad PRODUCE" commands.

SERIALS WORKBOOK MULTIPLE COPIES AND EXTRA CARDS (con'd)

Example: You want cards for Biology, ESS, and Documents. The location symbol of the Biology Library should print on the cards for the Union Catalog of the Main Library. Order 6 extra cards for ESS.

STEP ONE Order a card set for Biology and for the Union Catalog:

- 1) 049 ꝑꝑ YSMB P
- 2) Advance and SEND
- 3) PRODUCE/SEND
- 4) Reformat
- 5) At Home, key in lxc,ad
- 6) PRODUCE/SEND

STEP TWO Order a card set for Documents: ¹

- 1) 049 ꝑꝑ YSMD, YSMB P ²
- 2) Advance and SEND
- 3) At Home, key in ad
- 4) PRODUCE/SEND
- 5) Reformat
- 6) At Home, key in lxc,ad ³
- 7) PRODUCE/SEND

STEP THREE Order cards for ESS:

- 1) 049 ꝑꝑ YSMG, YSMD, YSMB P
- 2) Advance and SEND
- 3) At Home, key in ad
- 4) PRODUCE/SEND
- 5) Reformat
- 6) At Home, key in 7xc,ad ⁴
- 7) PRODUCE/SEND

¹ The order here is not important; either Documents or ESS may come next.

² Cards are not produced for holding libraries appearing after the first comma.

³ This will produce a shelflist card for the Union Shelflist with the location, Doc.

⁴ Key in 7xc here. 6 extra cards are for ESS; one is to be used as a shelflist card in the Union Shelflist with the location ESS.

SERIALS WORKBOOK

MULTIPLE COPIES-EXTRA CARDS WORKSHEET

- 1** You have a journal in Biology and in Math/Physics. Order a set of cards for each. In addition, Math/Physics needs 6 extra cards. The location symbol for Biology should print on the set of cards for the Union Catalog in the Main Library. *

- 2** You have a periodical in the ESS Library. Order a set of cards as well as one extra card for ESS. Since these are replacement cards, the Union Catalog does not need a set.

- 3** Both the Documents Department and the Reference Department subscribe to this monthly. Order one extra card for each. The Reference location should print on the cards for the Union Catalog in the Main Library. *

- 4** Engineering, Math/Physics, and Chemistry need card sets for the same serial. Chemistry also needs 2 extra cards. The Chemistry location should print on the cards for the Union Catalog. *

* Remember to order 1 extra card for the Union Shelflist when ordering card(s) or card set(s) for added locations.

- 5

[illegible]

- 7

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or printed text on the paper. A faint, light-colored mark resembling a large letter 'C' is visible on the left side of the page.

SERIALS WORKBOOK

FREQUENCY AND REGULARITY OF SERIAL PUBLICATIONS

Frequency and regularity of serial publications are coded in the fixed fields "fregun," character position 18, "regulr," character position 19, and variable fields 310 and 321.

Frequency can be printed in the collation from the fixed fields alone if the codes for "fregun" and "regulr" are adequate. For example, "irregular" will print automatically if character position 18 is "p" and 19 is coded "x."

"Fregun" and "regulr" are displayed and used in the OCLC serials control subsystem. Because of its importance to this subsystem, "fregun" has no default value. The inputting library must supply the correct code. "Regulr" which defaults to "r," regular, must be changed, if necessary, to agree with the frequency of the serial being cataloged.

Sometimes member cataloging found in the data base lacks codes in character positions 18 and 19. These are either Level 1 records or records cataloged before August 1975. An error report should be completed giving the correct codes and sent to OCLC so that the record in the data base can be updated.

The terms to be used to specify frequency are as follows:

TERM	CODE	MEANING
irregular	p	
daily	d	
semiweekly	c	twice a week
weekly	w	
biweekly	e	every two weeks
semimonthly	s	twice a month
monthly	m	
bimonthly	b	every two months
quarterly	q	
three times a year	t	
semiannual	f	twice a year
annual	a	
biennial	g	every two years
triennial	h	every three years
other	z	every three years
unknown	u	

The terms may be changed if necessary; for example, "annual, with quinquennial cumulations" is an amplification of the term, "annual," and does not replace it with another. If none of the terms above is appropriate, the cataloger may use another term.

SERIALS WORKBOOK FREQUENCY AND REGULARITY OF SERIAL PUBLICATIONS (con'd)

The terms to be used to specify regularity are as follows:

TERM	CODE	MEANING
regular	r	A weekly newspaper that is published once a week is regular.
normalized irregular	n	A publication that is not completely regular, but is regular in a predictable way.
completely irregular	x	Regularity cannot be predicted.
unknown	u	

The regularity code must be compatible with the frequency code. If the frequency is stated, the regularity code will be coded "r" unless "n" or "x" agree more closely. That means that if the frequency code is "p," the regularity code "x" must be used; and that if frequency is unknown, regularity is also unknown.

The variable field 310, current frequency, should be used only when the frequency statement cannot be printed by the fixed field codes in character positions 18 and 19, e.g., "Monthly (except July and August)" or when it is necessary to use a date with the current field. This happens when the beginning date of the current frequency is not the same as the beginning date of the publication.

When variable field 310 is used, code the fixed fields with the closest available codes, using the chart below.

VARIABLE FIELD 310	FIXED FIELD 18	FIXED FIELD 19
2 no. a year	f	x
4 or 5 no. a year	q	x
6, 7, or 8 no. a year	b	x
9, 10, 11 no. a year	m	x

Capitalize the initial letter of each frequency in variable field 310. Use a comma between subfields, unless a subfield ends with a parenthesis. The comma is input at the end of subfield "a" if subfield "b" begins with printed data. Numbers may be either arabic numerals or spelled out. The field never ends with a period unless the last item is an abbreviation.

Subfield "b" is used only when the date of the current frequency is different from the beginning date of publication in field 362.

Variable field 321 expresses former frequency. It should be used in conjunction with field 310 and fixed fields "frequ" and "regulr."

Multiple 321 fields should be input in the order in which they are to print with the first frequency in the first 321 field. Any 321 field should be input after the 310 field, however, even though multiple 321 fields will print in order of input in paragraph form followed by the 310 field.

When a serial has ceased publication, the latest frequency should be input in field 310. Character positions 18 and 19 should also be coded to agree with the latest frequency. All earlier frequencies should be input in field 321.

Editing instructions are the same in field 321 as in field 310.

SERIALS WORKBOOK

* ANSWER SHEET *

MULTIPLE COPIES-EXTRA CARDS WORKSHEET

- [1] You have a journal in Biology and in Math/Physics. Order a set of cards for each. In addition, Math/Physics needs 6 extra cards. The location symbol for Biology should print on the set of cards for the Union Catalog in the Main Library. *

049 ~~BB~~ *YSMB F; advance and SEND; PRODUCE/SEND; Reformat; 1xc,ad; PRODUCE/SEND.*

049 ~~BB~~ *YSMQ, YSMB F; advance and SEND; ad; PRODUCE/SEND; Reformat; 7xc,ad; PRODUCE/SEND.*

- [2] You have a periodical in the ESS Library. Order a set of cards as well as one extra card for ESS. Since these are replacement cards, the Union Catalog does not need a set.

049 ~~BB~~ *YSMG F; advance and SEND; ad; PRODUCE/SEND; Reformat; 1xc,ad; PRODUCE/SEND.*

- [3] Both the Documents Department and the Reference Department subscribe to this monthly. Order one extra card for each. The Reference location should print on the cards for the Union Catalog in the Main Library. *

049 ~~BB~~ *YSMR F; advance and SEND; PRODUCE/SEND; Reformat; 2xc,ad; PRODUCE/SEND.*

049 ~~BB~~ *YSMD, YSMR F; advance and SEND; ad; PRODUCE/SEND; Reformat; 2xc,ad; PRODUCE/SEND.*

- [4] Engineering, Math/Physics, and Chemistry need card sets for the same serial. Chemistry also needs 2 extra cards. The Chemistry location should print on the cards for the Union Catalog. *

049 ~~BB~~ *YSMC F; advance and SEND; PRODUCE/SEND; Reformat; 3xc,ad; PRODUCE/SEND.*

049 ~~BB~~ *YSME, YSMC F; advance and SEND; ad; PRODUCE/SEND; Reformat; 1xc,ad; PRODUCE/SEND.*

049 ~~BB~~ *YSMQ, YSME, YSMC F; advance and SEND; ad; PRODUCE/SEND; Reformat; 1xc,ad; PRODUCE/SEND.*

* Remember to order 1 extra card for the Union Shelflist when ordering card(s) or card set(s) for added locations.

* ANSWER SHEET *

- [5] Aud-Vis has placed a subscription to an annual bibliography of motion picture reviews. They need only three cards for their catalog. Order three cards for Aud-Vis as well as a set for the Union Catalog in the Main Library.

049 PP YSMW F; advance and SEND; ad; PRODUCE/SEND; Reformat;
4xc,ad; PRODUCE/SEND

- [6] The Union Shelflist is missing a shelflist card for a work in the Microforms Library. Order the shelflist card.

049 PP YSMB F; advance and SEND; 1xc,ad; PRODUCE/SEND.

- [7] The Environmental Information Service (EIS) wants two extra cards for every new serial obtained by the Biology Library. Biology needs one complete card set in addition to one extra card for a professor interested in this particular serial. Order the necessary cards for Biology, the Union Catalog and for EIS.

049 PP YSMB F; advance and SEND; PRODUCE/SEND; Reformat;
4xc,ad; PRODUCE/SEND.
